	Urgent	**Not Urgent**
Important	Do - (Your MVP) ● Be able to create tasks ● Be able to remove tasks ● Be able to display these tasks ● Custom commands or a bash script for these	Schedule - (For V2.0+) ● Create categories for tasks ● Be able to add tags to categories ● Display everything with a certain tag
Not Important	Delegate - (Use a library) ● Format the tasks nicely when displaying ● Proper and efficient data storage using JSON instead of text ● Proper error handling with improper arguments for commands	Delete - (Cut it) ● A front end and GUI display ● Connects to my phone and is able to grab/send info for these tasks ● Full-on app for users to download and use

- Allow creation/removal of tasks
- Be able to view the full task list
- Create categories for tasks (and modify them with tasks)
- Create subcategories for tasks (and modify them with tasks)
- Add tags for categories that are related
    - Display everything within that tag
    - **I prefer this over categories and subcategories**
- Display the categories with their tasks
    - Either every category
    - Or a selected category, depending on command arguments
